

DEALROOM

Enterprise Sales Platform · Technical & Methodology Overview

VIEW HERE: <https://buyersagent.netlify.app>

WHAT IT IS

DealRoom is the self enablement AI-powered deal orchestration platform I built to support managing complex, multi-stakeholder sales cycles. It brings together a shared action plan, real-time deal intelligence, AI coaching, and executive-ready outputs inside a single, role-aware interface. Structured around proven processes and practiced sales methodology.

The platform is designed around the reality of enterprise selling: deals stall not because the product is weak but because alignment breaks down, next steps get fuzzy, and internal champions lose visibility. DealRoom solves for that.

BUILT BY Mark Huckins, Sr. AE	DEPLOYED ON Netlify (buyersagent.netlify.app)
PRIMARY USER Enterprise Account Executives	TARGET DEALS Complex, multi-threaded B2B sales cycles

HOW THE AI WORKS

Every AI feature in DealRoom calls the Anthropic Messages API directly from the browser. There is no middleware, no proxy server. Each request includes a deal-aware system prompt built dynamically from the active deal's context: company, stage, stakeholders, task completion status, close date, and deal value.

AI FEATURE	WHAT IT DOES
Deal Brief	Generates a real-time snapshot of deal health, key risks, open tasks, and stakeholder alignment gaps based on current deal state.
AI Coach	Acts as a live coaching assistant. Answers seller questions in context: objection handling, competitive positioning, next-step guidance, executive messaging.
Action Plan	Produces a prioritized list of seller-side next steps tied to the current deal phase, outstanding tasks, and buyer org dynamics.
Executive Summary	Drafts a buyer-facing executive summary suitable for a champion to share internally with economic buyers or procurement.

DEAL ORCHESTRATION: PHASE BY PHASE

DealRoom structures every deal across six sequential phases. Each phase has a defined set of tasks, dual ownership (seller + buyer), approval gates for sensitive steps, and completion tracking. Progress is visible at a glance and informs how the AI contextualizes every output.

#	PHASE	KEY ACTIVITIES	OWNERSHIP	GATE
1	Value Alignment	Discovery meeting, BOVI/deep discovery, confirm 3 core pain points	Seller + Buyer	Seller + Buyer
2	Product Demo	Day-in-the-life demo tailored to buyer workflows and use cases	Seller	Seller
3	Trial / Evaluation	Technical setup, champion training, mid-point check-in, trial findings + ROI	Seller + Buyer	Seller + Buyer
4	Business Case	Executive sponsor presentation (CDO), ROI model and cost-benefit sign-off	Seller + Buyer	Approval Req.
5	Decision	Pricing, plans, and final business case review	Seller + Buyer	Seller + Buyer
6	Formalize	Security review, legal/procurement review, contract execution	Seller + Legal	Approval Req.

DUAL-ROLE INTERFACE

DealRoom renders differently depending on who is logged in. The seller view gives the AE full control: deal creation, task management, stakeholder mapping, and AI tool access. The buyer view is a simplified, read-only portal where the champion can see the shared action plan, track milestone progress, and stay aligned without needing access to the seller-side data.

AE / Seller View	Champion / Buyer View
• Create and manage multiple deal rooms • Full action plan with task status and approval gates • Stakeholder org chart with designation tracking • AI Brief, Coach, Action Plan, and Executive Summary • Deal analytics and engagement scoring • Content hub for buyer-facing assets	• Simplified login via prospect portal • Read-only milestone and task progress view • Shared action plan with co-owned tasks visible • Access to content and resources shared by seller • No access to AI tools or deal analytics • Designed to keep the champion aligned and informed

WHY THIS APPROACH

Most enterprise deals don't lose on product. They lose because the process drifts. Champions go dark, execs get looped in too late, and the seller is the only one who knows where things stand.

DealRoom keeps everyone oriented. The action plan is shared. The timeline is visible. The AI knows the deal context and can help the AE react in real time. The result is a more disciplined, repeatable process that mirrors how the best enterprise sellers already operate.

TECH STACK

LAYER	DETAIL
Frontend	React 18.2 via CDN UMD build — no bundler, no build step, pure browser runtime
JSX Transform	Babel Standalone 7.23.5 — compiles JSX in-browser at load time
Styling	Inline styles + custom CSS variables — zero external UI library dependencies
AI Engine	Anthropic Claude claude-sonnet-4-20250514 via /v1/messages REST API
Hosting	Netlify static deploy — no backend server, no database
State Management	React useState only — all deal state held in client memory during session
Fonts	Plus Jakarta Sans via Google Fonts CDN

Business Outcomes & Value Identification

Kraft Heinz - CPG - Food & Beverage

+ Build Business Case

DISCOVERY SUMMARY

Kraft Heinz is a global CPG leader managing 8,000+ SKUs across 25 retail channels. The organization is investing heavily in digital commerce growth but is held back by fragmented content operations, manual syndication workflows, and lack of real-time shelf visibility. A centralized PXM solution directly addresses their top 3 board-level priorities: accelerate eCommerce revenue growth, reduce operational costs, and improve brand integrity at shelf.

+ Corporate Strategy & Growth Initiatives

4

Strengthen and accelerate rapid growth globally across all digital channels

Drive 20% CAGR in eCommerce net sales by 2027

Create authentic brand experiences with devoted consumers

Invest in adjacent segments — private label and D2C expansion

+ Top Business Outcomes

3

Grow digital shelf revenue by \$120M in organic eCommerce sales

Eliminate 90% of non-value-added FTE time spent on manual content tasks

Achieve 100% GS1-compliant data syndication to all tier-1 retailers

+ Current Challenges

5

No centralized repository for product content and digital assets

Data is inaccurate and inconsistent across 12+ retail portals

Cannot react fast enough to changing Buy Box winners and pricing algorithms
